**SUSTAINABLE SOLUTIONS
IN TABLEWARE AND FOOD-PACKAGING**

CATALOG 2024

Today, I have the privilege of welcoming Nupik to the deSter team. We are excited and look forward to many years of successful cooperation. At deSter, we have bold plans for the future and celebrate the opportunity that our working together represents.

The next few months will be challenging and exciting as we work together towards achieving our goals. Apart from keeping the operation running and our customers happy and satisfied, we will work on integrating our businesses, identifying best practices and implementing appropriate changes.

We are confident that, with our existing track record of successful integrations, we will be able to support you in bringing the business to new heights.

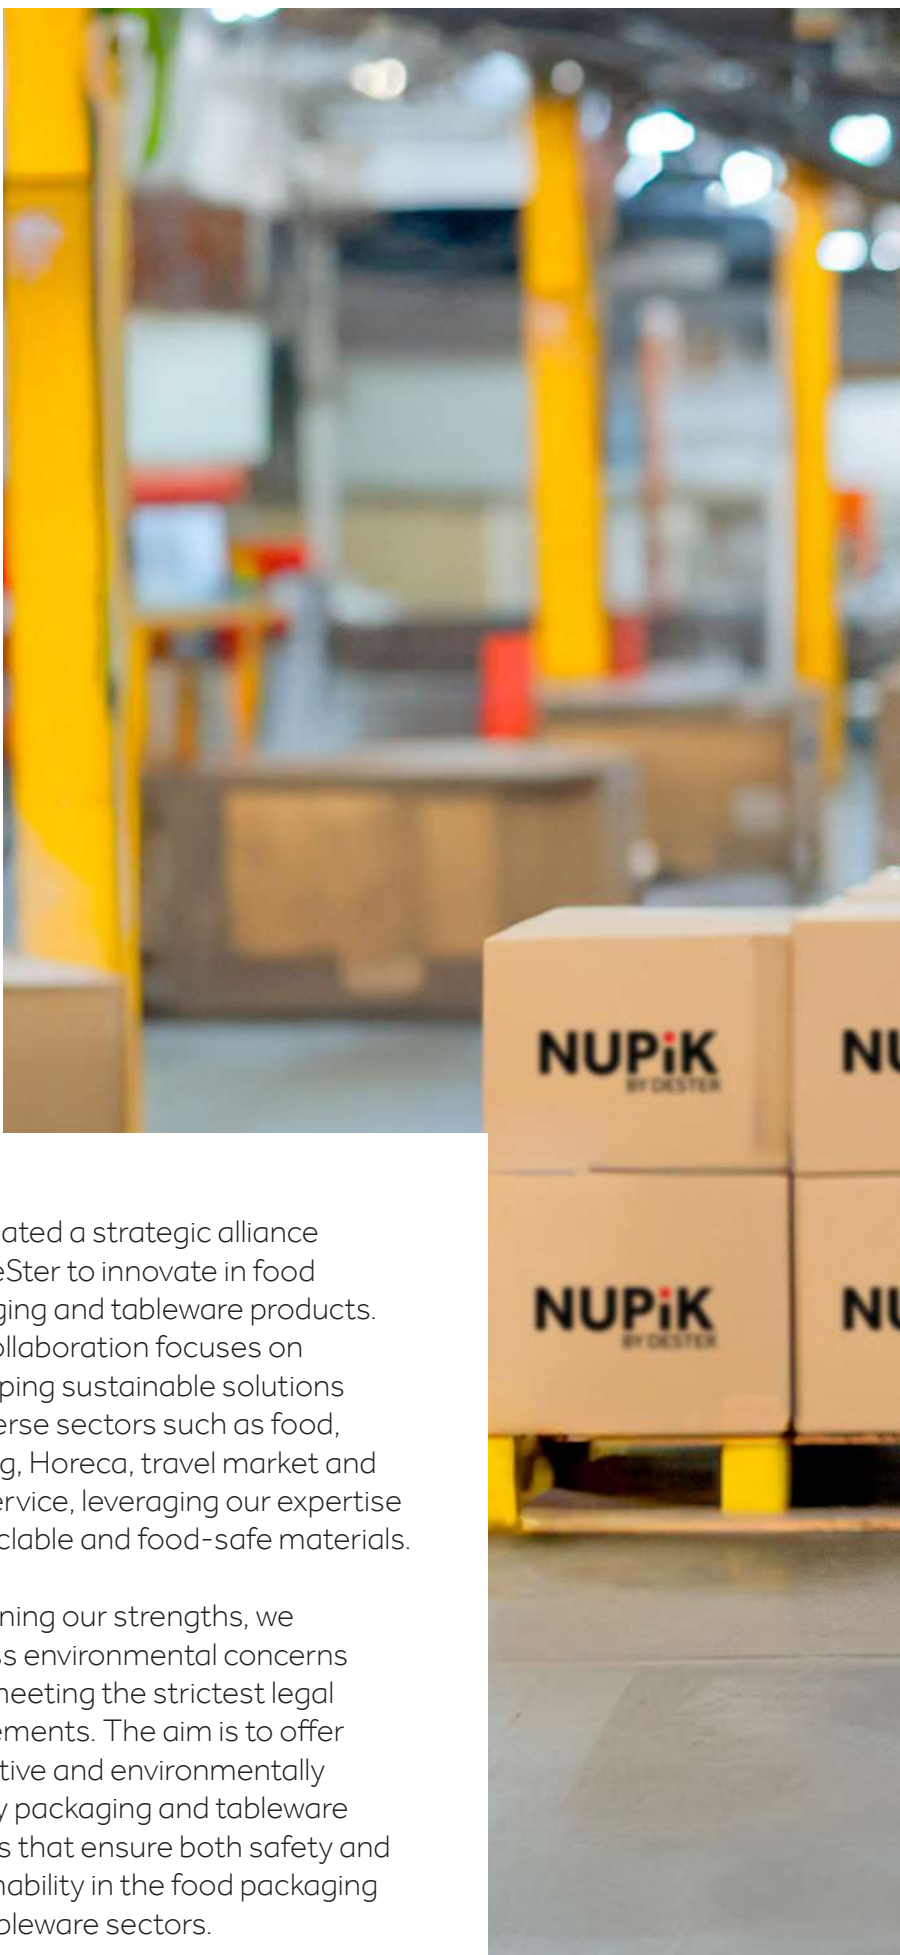

- Stef Van de Perre, Managing Director of deSter

WHO WE ARE

We created a strategic alliance with deSter to innovate in food packaging and tableware products. This collaboration focuses on developing sustainable solutions for diverse sectors such as food, retailing, Horeca, travel market and foodservice, leveraging our expertise in recyclable and food-safe materials.

Combining our strengths, we address environmental concerns while meeting the strictest legal requirements. The aim is to offer innovative and environmentally friendly packaging and tableware options that ensure both safety and sustainability in the food packaging and tableware sectors.

ABOUT NUPIK

OUR MISSION

BY DESTER

Nupik is
a deSter
member
since 2024

At Nupik, we believe sustainable packaging and tableware is for everyone. That's why we persist in finding the best materials for our products on a daily base and collaborate with partners who carry the same values at heart.

We're based in Barcelona, a cosmopolitan city that welcomes different cultures, foods and design trends. This mix of different elements keeps us up to date with the needs of today.

We also believe that our city connects the south with the north, be it just Spain or entire Europe. At Nupik, we would love to do the same. Sustainable packaging and tableware should be for every culture, serving any food and be convenient for dining in or eating out.

Our catalog is all about serving you, our customer.

Wherever you may be, whatever food you fancy.

responsibility and economic sustainability. A bespoke ESG framework defines focus topics, regular evaluations, and the sharing of the findings.

Through dedicated research and close collaboration with their customers, deSter is able to deliver functional & attractive products that not only deliver on today's requirements but also anticipate the needs of tomorrow.

deSter, headquartered in Hoogstraten – BE, has production units in Hoogstraten (BE), Lima (OH, US), Prachinburi (TH), and now Barcelona (SP), in addition to global warehousing activities and sales offices.

ECOVADIS PLATINUM

AWARD FOR SUSTAINABLE SOLUTIONS

EcoVadis stands as a leading global authority in evaluating Social and Environmental (ESG) performance, offering a comprehensive assessment and guidance on sustainability practices. With a vast network encompassing over 100,000 rated companies across diverse sectors, EcoVadis is renowned for its impartiality and reliability.

Employing a robust methodology grounded in internationally recognized sustainability benchmarks such as the Global Reporting Initiative (GRI), the United Nations Global Compact, and ISO 26000, EcoVadis scrutinizes companies' initiatives and outcomes through a structured approach of Policies, Actions, and Results.

The assessment framework spans four critical domains: Environment, Labor & Human Rights, Ethics, and Sustainable Procurement, providing a holistic view of companies' sustainability efforts.

Attaining the prestigious Platinum rating signifies Nupik as a deSter's members' steadfast commitment to embedding sustainability throughout its operations and supply chain, thus fostering a positive impact on both the environment and society at large. In essence, EcoVadis offers a comprehensive evaluation of our business practices, driving us towards a future characterized by environmental stewardship and social advancement.

MATERIALS

Eco-friendly materials utilized in food packaging prioritize sustainability and environmental responsibility. These materials are carefully selected to minimize harm to the planet while still providing effective packaging solutions.

They are biodegradable, compostable, or recyclable, contributing to a reduction in waste and pollution. By embracing eco-friendly materials, food packaging strives to align with principles of a circular economy, where resources are used efficiently and waste is minimized.

Additionally, these materials may be sourced from renewable resources, further reducing their environmental impact and promoting long-term sustainability in the packaging industry.

We made a selection of materials with full focus on sustainable use and functionality. Every material has its own specifications.

To keep it simple, we summarized them in a matrix.
All information is based on tests with our own products.

BAGASSE

Bagasse is a plant-based material widely used in foodservice packaging. It is derived from crushed sugarcane pulp, specifically the fibrous residue left behind after sugarcane is harvested. It is naturally beige.

WHEAT STRAW

Wheat straw is a byproduct of wheat cultivation, and it has gained attention due to its sustainable properties. It is abundant and typically discarded, reducing waste and environmental impact. It has a whiter color with entangled fibers.

CELLULOSE BASED FOIL

Cellulose, a natural polymer found in plant cell walls, is an abundant and renewable resource. This makes cellulose-based materials an eco-friendly choice for foodservice packaging, reducing the reliance on non-renewable resources.

This makes it possible to have fully compostable transparent surfaces.

R-PET

R-PET is a recycled form of PET, which is used in foodservice for items like water bottles, salad containers, and more. We like to use it for our lids.

By utilizing R-PET, the industry reduces its dependence on virgin plastics, contributing to environmental sustainability.

PLA

Polylactic acid (PLA) is a biodegradable polymer of lactic acid, which is produced via fermentation processes of sugar or starch (e.g. corn). After this process, the lactic acid is polymerized into another polymer called Polylactic acid (PLA). The result is a white, translucent or clear bioplastic, made of 100% natural resources. This material can be printed, and it's indicated suitable for cold drinks and and frozen foods.

Our PLA drinking cups are certified by DIN CERTCO according to EN 13432 norm. This means that the products should be biodegradable for 90% within a period of max 6 months under appropriate circumstances.

PAPER & WOOD

Wood and paper are integral materials in food packaging, with paper often derived from wood pulp. Around 90% of paper pulp is sourced from wood, making it a significant component in paper-based food packaging materials

PP

Polypropylene (PP) is widely employed in food packaging for several reasons. It is one of the most extensively recycled plastics, making it environmentally friendly.

Renowned for its waterproof and moisture-resistant properties, PP is an ideal material for packaging, ensuring the integrity and safety of food products.

RICE HUSK

Rice husk is a reusable material derived from the outer layer of rice grains, it contains hemicellulose, cellulose, and lignin, making it a viable substitute for traditional packaging materials like styrofoam and low-density polyethylene.

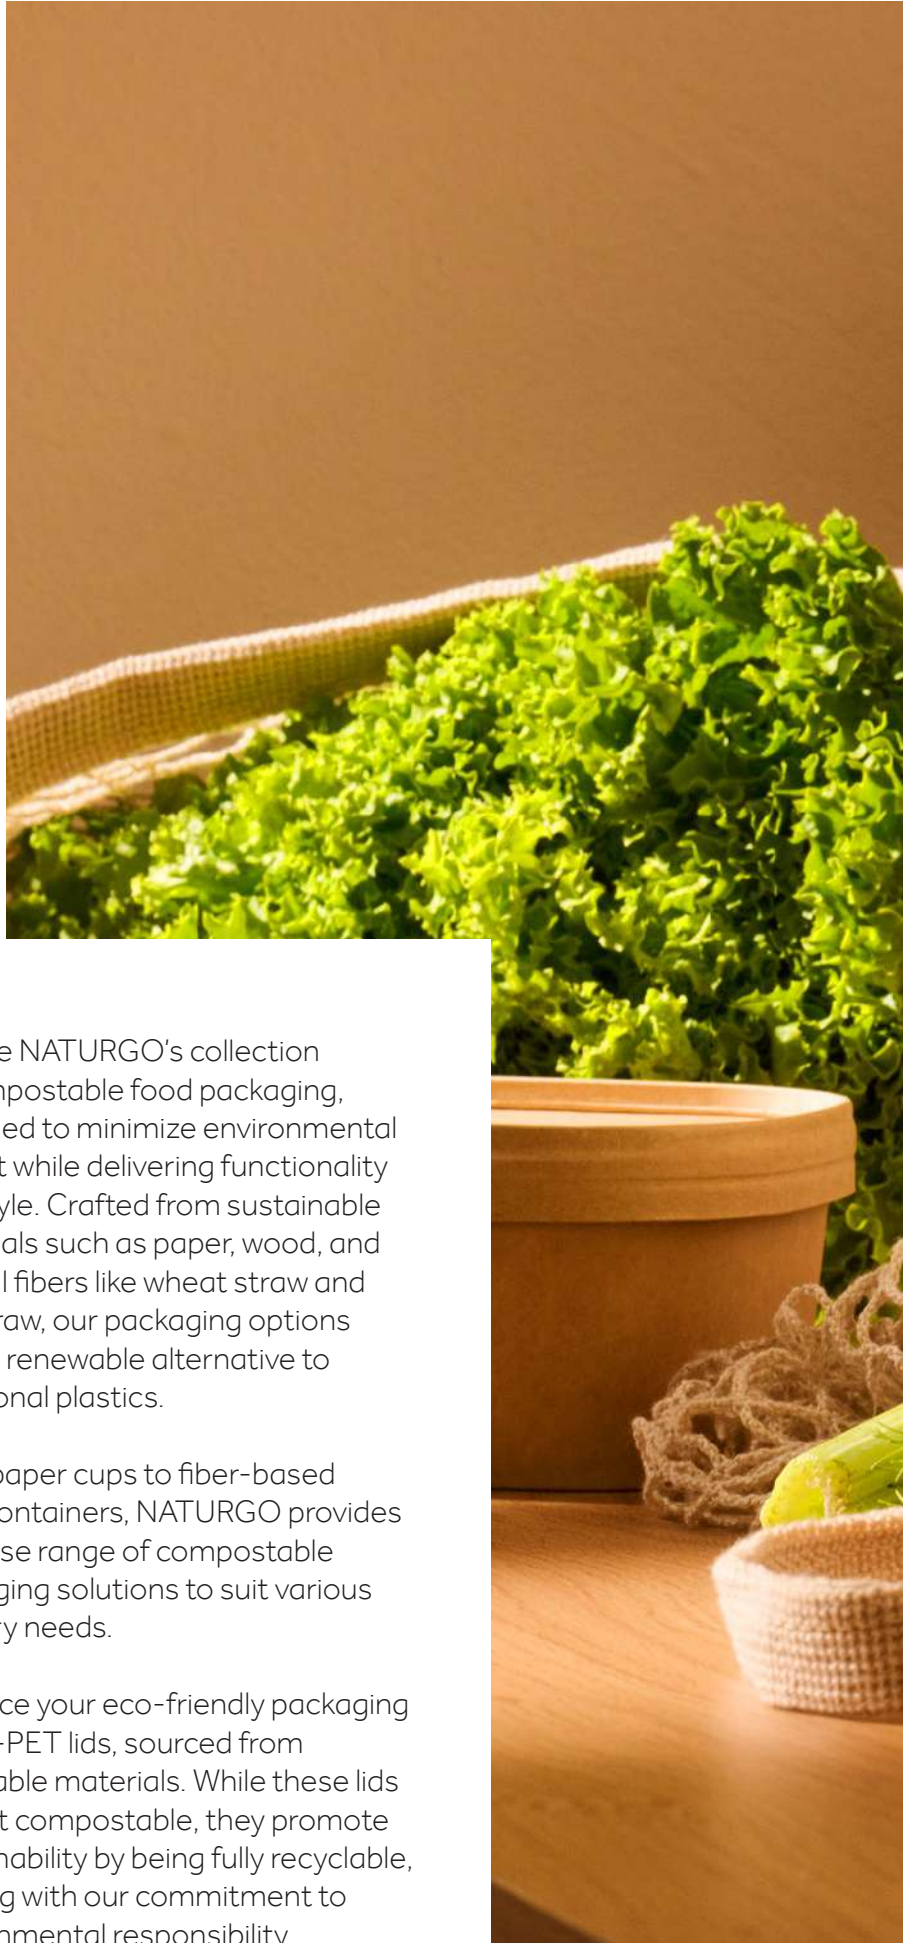

NATURGO

Explore NATURGO's collection of compostable food packaging, designed to minimize environmental impact while delivering functionality and style. Crafted from sustainable materials such as paper, wood, and natural fibers like wheat straw and rice straw, our packaging options offer a renewable alternative to traditional plastics.

From paper cups to fiber-based food containers, NATURGO provides a diverse range of compostable packaging solutions to suit various culinary needs.

Enhance your eco-friendly packaging with R-PET lids, sourced from recyclable materials. While these lids are not compostable, they promote sustainability by being fully recyclable, aligning with our commitment to environmental responsibility.

GRIP

COLLECTION

Introducing our stylish and eco-friendly square bowl made from bagasse, a sustainable material derived from sugarcane fibers.

Crafted from bagasse, this bowl is fully compostable, reducing environmental impact and promoting sustainability.

Choose from the lid options to suit your preferences and needs and keep your servings either fully compostable or place your bet on visibility.

Available in two sizes to accommodate various serving needs, from appetizers to main courses. Whether you're serving piping hot soups or refreshing salads, this bowl can handle both hot and cold foods with ease.

RIDGE COLLECTION

This fully compostable collection offers both sustainability and style for your food service needs.

Made from rice straw, a renewable resource, this bowl is fully compostable, reducing environmental impact and promoting sustainability. Choose the lid option to suit your preferences and needs.

Suitable for both hot and cold foods, Ridge enhances the presentation of your culinary creations, making them look as appetizing as they taste.

Despite its eco-friendly features and stylish design, this bowl remains an affordable choice for businesses looking to prioritize sustainability without compromising on cost.

CLAMSHELL COLLECTION

Bagasse clamshells are eco-friendly food packaging solutions made from the residue of sugarcane after juice extraction. These clamshells offer a sustainable alternative to traditional foam, cardboard, and plastic containers, contributing to reducing environmental impact.

Designed with a molded clamshell structure, bagasse clamshells offer durability and strength to securely hold food items without leakage or spillage. They are microwave-safe and freezer-friendly, ensuring convenience for both food storage and reheating.

These clamshells come in various sizes and shapes to accommodate different food items, ranging from small snacks to larger meal portions. They are widely used in the food industry for various applications, including takeaway meals, salads, sandwiches, and snacks.

PLATE COLLECTION

Bagasse plates offer a convenient and eco-friendly solution for events of all sizes.

Bagasse plates are lightweight yet sturdy, making them easy to transport and handle during events. Whether it's a corporate luncheon, a wedding reception, or a casual outdoor gathering, these plates provide hassle-free serving options.

With various sizes and styles available, bagasse plates cater to different event needs. From appetizers to main courses and desserts, there's a suitable plate for every dish, ensuring a seamless dining experience for guests.

Bagasse plates provide a reliable surface for serving foods, including moist or saucy dishes. Their spill-proof design prevents spills and messes, allowing guests to enjoy their meals without worry.

CUPS COLLECTION

Paper cups are versatile and eco-friendly food packaging solutions suitable for a variety of beverages. They are made from renewable resources and are biodegradable, making them an environmentally sustainable option.

Paper cups are coated with a thin layer of plastic to prevent leakage and ensure beverage freshness without compromising recyclability making it perfectly SUP compliant.

They can be customized with designs, logos, or branding, making them ideal for promoting businesses or events.

Paper cups come in various sizes and styles, suitable for serving everything from hot coffee to cold beverages like smoothies and soft drinks.

With or without lids, paper cups offer convenience for on-the-go consumption, making them perfect for cafes, restaurants, and events.

CUTLERY COLLECTION

Paper and wooden cutlery are eco-friendly alternatives to traditional plastic utensils, offering numerous benefits.

Both paper and wooden cutlery are biodegradable and compostable, reducing the environmental impact compared to plastic options.

Our cutlery is designed to have great mouthfeel and to keep its strength during the entire meal to have an impeccable performance, from beginning to end.

We deliver our cutlery in wrappers, either in cutlery packs or wrapped per 100, providing added hygiene and convenience, especially for catering and takeaway services.

RECYCLE

Recyclable food packaging is instrumental in minimizing environmental impact by facilitating the reuse and repurposing of materials. Various materials used in food packaging, such as Polypropylene and Polystyrene, can undergo recycling processes to create new packaging or other products.

These materials are collected, sorted, cleaned, and processed to be transformed into new items, contributing to the circular economy and reducing waste sent to landfills.

By opting for recyclable food packaging, businesses and consumers alike play a vital role in promoting sustainability and mitigating the depletion of natural resources.

CONTAINER COLLECTION

Polypropylene (PP) food containers offer a sustainable solution for packaging various food items.

PP is recyclable, contributing to the circular economy by reducing waste and conserving resources.

The material makes the containers sturdy and robust, ensuring the safe transportation and storage of food items without compromising quality.

These containers come in various shapes and sizes, suitable for a wide range of food products, including liquids, solids, and semi-solids.

PP is resistant to chemicals and moisture, keeping food fresh and preventing contamination.

The material is approved to the highest food contact standards, ensuring that the food stored in these containers remains safe for consumption..

PLATES AND BOWLS COLLECTION

Recyclable plates and bowls made of PP and PET offer a sustainable alternative for serving food.

Plates and bowls made of PP and PET are sturdy and reliable, suitable for various types of food without the risk of breakage. These materials are on the other hand lightweight, which adds to their convenience for outdoor events, picnics, and parties.

They come in various sizes and shapes, catering to different serving needs, whether for casual gatherings or formal events.

Cost-Effective: Recyclable plates and bowls made of PP and PET offer an economical solution for food service establishments, balancing sustainability with affordability.

RECYCLABLE AND REUSABLE CUPS

Ah, good old classics. Recyclable cups and lids made of Polypropylene (PP) and Polystyrene (PS) offer practical and eco-friendly solutions for your favorite beverage.

PP and PS are durable materials, ensuring that the cups and lids maintain their integrity during use, reducing the risk of leaks or spills.

Both PP and PS cups and lids can withstand high temperatures, making them suitable for hot drinks.

We also offer a vending cup, which is tested to work seamlessly with most vending machines.

Make sure to ask us for advice on which cup suits your needs best.

REUSABLE

Reusable food packaging offers numerous benefits for both the environment and businesses:

Reusable packaging reduces waste generation and lessens the demand for single-use materials, thereby preserving natural resources.

We use four materials which have the reliability and strength to serve for reusable purposes : Polypropylene, rice husk, polystyrene and Bio PP*.

Quickly discover our reusable ranges on the following pages.

**Bio PP is a type of PP that undergoes a bio-based production process using renewable resources such as biomass or plant-based feedstock. Unlike traditional PP, bio PP has a lower environmental impact and can biodegrade under certain conditions, offering a more sustainable alternative for reusable packaging solutions. Feel free to contact us for more detailed information about these materials.*

REVOLVE COLLECTION

Introducing a versatile and eco-friendly reusable packaging range crafted from Polypropylene (PP), designed to elevate the take-out and delivery experience while reducing environmental impact. It's a game changer.

With a fancy design, these containers seamlessly blend into various environments, from upscale eateries to casual cafes, enhancing the presentation of meals and snacks.

Each container comes with a secure lid, ensuring leak-proof transportation of food items. Ideal for take-out and delivery services, it prevents spills and preserves the freshness of the contents.

Designed for practicality, these containers are easy to wash, saving time and effort for busy food establishments. Simply rinse or toss them in the dishwasher for effortless cleaning.

* We can produce this range in BIO PP combined with PP. Through this innovative bio-based material, this collection has the same benefits as traditional PP regarding food contact and its use with high-temperature liquids or food; high resistance making it almost unbreakable; and with a high level of recyclability. All with a vegetal source that makes it renewable, more sustainable and significantly reducing the carbon foot print.

COLD CUP COLLECTION

Introducing our most festive range: the colde cup collection. Crafted from durable Polypropylene (PP), offering a wide array of designs to suit every beverage preference.

Our cup range boasts an extensive selection of designs, catering to various tastes and preferences. Whether you prefer a sleek and minimalist style or a vibrant and playful design, there's something for everyone.

From coffee to smoothies, tea to cocktails, our cups are designed to accommodate virtually any beverage imaginable. Each cup is carefully crafted to enhance the drinking experience, ensuring optimal enjoyment with every sip.

In addition to our PP range, we offer two cups made of rice husk. These cups combine the sustainability of rice husk with the durability of PP, providing an eco-friendly alternative for conscious consumers.

CUTLERY COLLECTION

Reusable cutlery made of Polypropylene (PP) offers a sustainable alternative to single-use plastic utensils.

PP is a recyclable material, making it an environmentally friendly option for cutlery. PP is also known for its durability and resistance to wear and tear. Reusable cutlery made of PP can withstand multiple uses and is less likely to break or deform compared to disposable plastic utensils.

PP cutlery is dishwasher safe and easy to clean, making it convenient for everyday use. Whether at home, picnics, or events, users can simply wash and reuse PP cutlery, eliminating the need for disposable options and promoting sustainability.

TISSUE AND OTHERS

Enhance your dining experience with our range of paper napkins and essential condiments. Whether you're hosting a formal dinner or a casual gathering, our products ensure convenience, hygiene, and style.

NAPKINS AND PLACEMATS

Made from recycled or sustainably sourced paper, these napkins and placemats are environmentally friendly alternatives to traditional options. They reduce the demand for virgin materials and minimize waste.

Paper napkins and placemats come in a variety of colors, and sizes, making them suitable for any table setting or theme.

Disposable paper napkins and placemats offer unmatched convenience, eliminating the need for washing and ironing. They simplify cleanup after meals, saving time and effort for hosts and guests alike.

Paper napkins provide a sanitary option for diners, ensuring a clean and hygienic dining experience. Disposable placemats also add an extra layer of protection for table surfaces, guarding against spills and stains.

CONDIMENTS COLLECTION

We offer a range of condiments and hygienic wipes designed to enhance dining experiences while prioritizing hygiene and convenience.

Our spiced condiments provide the perfect balance of flavor for any dish. Made with quality ingredients, these condiments add depth and richness to culinary creations.

On the other hand, we have our hygienic wipes to provide a quick and effective solution for maintaining cleanliness before and after meals. Whether dining at home or on the go, these wipes offer peace of mind by effectively removing germs and bacteria.

Our commitment to quality and innovation ensures that each product in their condiment and hygienic wipes line meets the highest standards of taste, convenience, and hygiene.

BRANDING

Discover the transformative power of branding in food packaging. Elevate your products and captivate consumers with customized packaging solutions that not only protect but also enhance your brand identity.

Branded packaging stands out on shelves, attracting attention and driving consumer interest. It serves as a powerful marketing tool, conveying your brand message and values, like freshness, safety and amazing taste, to consumers, enhancing the overall experience.

We have several options to meet your needs.
Are you ready to show off?

CUSTOMIZATION OPTIONS

THE IMPORTANCE OF BRANDING

Think of branding as the personality of your product. It's not just a sticker on the package; it's what connects with people and helps them decide. Your brand is like the sauce that gives flavour to your dish, shaping the taste of your product.

Packaging is the first encounter between your product and the buyer, setting the stage for a strong brand. A well-branded package doesn't just grab attention; it tells a story of trust and loyalty. It's more than just a logo; it's a promise to your customers, something they can count on.

We offer many customization options to choose from, and we're happy to share all the ins- and outs of the production process, extra costs, MOQ's and recyclability- options.

FLEXO / DRY OFFSET PRINT

Our most recommended customization option is print. It's simple and super versatile, since there are no limitations in color or shape. The artwork is directly printed on the material and shaped afterwards.

This technique is best used on all paper cups or Briq paper bowls.

EMBOSSING

With embossing, we will adapt the mold of the product with a text of choice.

Colors are not possible, since this technique is shaped in the product without inks.

This technique is mostly used on plastics, but is also possible with bagasse items.

LASER

Laser is a relatively new technique, which can be used on different types of materials.

Every item will be lasered one by one. This laser will burn selected areas on the product, leaving a grey mark.

No colors, except from greytone, are possible.

HOTSTAMP

With our hotstamp technique, items will be stamped using tampon printing. This technique has limited color options.

It is mostly used on plastic items.

IML

IML means In-Mold-Label, whereby we insert the label directly in the mold before we fill it with resin.

This results in a label that covers the entire product in a branding of choice, without any color limitations.

DIY

We also offer DIY- solutions to support your branding in no - time . We offer templates of banderoles, stickers and sleeves, and will advise on how to print your solution locally.

AFTERLIFE

Our food packaging is designed to be recyclable, aligning with the latest recycling guidelines. Local waste regulations should be followed for proper recycling.

Certain packaging options are compostable, meaning they can be processed alongside organic waste in composting facilities, offering an eco-friendly end-of-life solution. Composting locally ensures minimal environmental impact.

The tableware and packaging designed for reuse, it means can be washed and reused multiple times, promoting sustainability and reducing waste.

SUSTAINABILITY AT NUPIK

THE CORE OF OUR BUSINESS

More info can be found in our sustainability report.

At Nupik Internacional, sustainability is at the core of our mission.

We align ourselves with the broader goals set during the Spanish Presidency of the Council of the EU, focusing on boosting Europe's reindustrialization and achieving Open Strategic Autonomy. Our dedication to sustainability extends to the implementation of practical measures during this European presidency, with a particular emphasis on ecological initiatives, making our operations more sustainable than ever before and contributing to a greener future.

Key actions that resonate with our values include renewing our production methods, ensuring open strategic autonomy, advancing the green transition, and promoting environmental adaptation. Our commitment to sustainable practices not only aligns with these European priorities but also reflects our responsibility to contribute to a more environmentally conscious and resilient future.

We're also convinced that it's hyper important to achieve certifications on different topics to make sure that our standards resonate with the rest of the world. Find some examples below.

TUV INDUSTRIAL COMPOST

The products with the OK industrial compost label are guaranteed as biodegradable in a plant industrial composting, aligned with the Directive EU packaging (94/62/EEC).

SPANISH STANDARD UNE-53928 & EUROPEAN STANDARD EN 12875

specifying that thermoforming or injection plastic tableware can be used after washing in the dishwasher.

UNE-EN 13432:2001

compliant to standards for composting packaging materials, developed and approved by different agencies throughout Europe.

LIFECYCLE OF A PRODUCT

WHAT HAPPENS AFTER USE?

End - of - life management of a product matters more than ever. Since we aim to avoid waste, we offer several solutions to restore the material and energy that has been used in production. This helps relieve the stress on our environment, and reduce waste to the max.

Many paper and fiber items are (home) compostable.

This means that you can compost them yourself (home compostable), or that they can be composted by industrial partners to fasten the process and filter out any remaining residu.

All energy and minerals released during this process will be returned to the earth.

All (single use) plastics we use are either already recycled (R-PET) or recyclable.

You can dispose all items in the bin and everything will be recycled with regular waste streams, according to your local waste management.

All recovered material will be industrially cleaned and re-grinded to re-use or incinerated to use the released energy in other production processes.

Reusables work with a closed loop system. Since all items are used multiple times, collecting and washing is necessary.

Local washing facilities can help out with the logistics and return all items squaky clean.

When an item is broken or worn out, it can be recycled as well. Since the items have allways been in a closed loop in a foodsafe environment, it can be regrinded to be mixed in the material mix of the same item, making it a fully closed loop.

OVERVIEW

A short overview per material to ensure you find what you're looking for.
